Your body can suffer from many diseases. Some are visible (pimples, fever, redness...) and others are not (you may not even know that you are sick).

That's why your body needs to be checked by health professionals. It is important to be tested. Screening is looking to see if you have a disease or not.

There are several screening methods, depending on the disease you're looking for:

- A blood test
- A smear for cervical cancer, for example, or another sexually transmitted disease
- A drop of blood on the finger to detect HIV AIDS, Hepatitis B or C
- HIV AIDS self-testing at home
- A mammogram (breast examination)

Many diseases can be treated very well, especially if detected early! A screening test will give you peace of mind if it's negative.

WOMEN ABUSE

Many situations can be described as violent situations :

- You are dominated, controlled by your partner, by the person who hosts you, or by a member of your family.
- Forced to have sex.
- You get access to an accommodation in exchange of some services.
- One is psychologically violent with you : humiliation, threats, blackmail...
- There is physical violence in your romantic relationship.
- You have suffered violence during your migratory journey : sexual abuse, rape, humiliation, insults...

If you recognize yourself in those situations, do not hesitate to talk to a family member close to you, a friend or a specialized association.
